

CYBER G-TECH

CYBER G-TECH

**Cyberattacks on small and medium businesses
+Individual Customers**

PROBLEM STATEMENT

For Business Management (SBM) Limited Resources: Small businesses often operate with constrained budgets, making it difficult to invest in advanced cybersecurity solutions.

Operational Disruption: A single cyberattack can halt operations, damage customer trust, and lead to financial collapse.

Compliance Pressure: Increasing regulations (like GDPR, HIPAA) demand strong data protection, but SMBs struggle to meet these standards.

Knowledge Gap: Owners and employees may lack training in recognizing and preventing cyber threats.

◆ For Individuals

Privacy Risks: Personal data (financial info, health records, social media activity) is vulnerable to theft and misuse.

Identity Theft: Individuals face growing risks of fraud through phishing, spyware, and credential leaks.

Digital Dependency: With reliance on online banking, shopping, and communication, even a minor breach can cause significant harm.

Awareness Issues: Many individuals underestimate cyber risks or fail to adopt basic protective measures (strong passwords, updates, backups).

• **OVERVIEW**

The purpose (accessible cybersecurity for SMBs and individuals).

- Key features like quick health checks, risk assessment, step-by-step fixes, and automated reports.
- Target users split into SMBs (protecting customer data, compliance, visibility) and individuals (personal breach checks, device/account security, monitoring).
- The business model (freemium, one-time report fee, partnerships).
- The value proposition (affordable insights for SMBs, peace of mind for individuals).
- Clear next steps for launching and validating.

KEY FEATURES

1. Quick Security Health Check : Instantly scans emails and websites for breach exposure.

- Detects if domains are flagged on malware/phishing databases.
- Confirms HTTPS and basic security headers.

2. Risk Assessment : Assigns a transparent **security score (0–100)**.

- Categorizes risk into **Low, Moderate, High tiers**.
- Highlights top vulnerabilities (e.g., exposed accounts, missing HTTPS, weak hygiene).

3. Step-by-Step Fixes

- Provides **non-technical guidance** for SMBs and individuals.
- Fixes include enabling 2FA, adding SPF/DMARC, enforcing HTTPS, and using password managers.
- Action plan broken into **7-day improvement roadmap**.

4. Automated Reports

- Generates **personalized PDF reports** with findings and fixes.
- Delivered automatically via email.
- Includes a clear summary, prioritized actions, and resource links.

5. Freemium Monitoring

- Free one-time scan for awareness.
- Optional monthly monitoring with breach alerts and hygiene reminders.
- Affordable upgrade path for SMBs and individuals.

6. Partnership Integrations

- Affiliate links to trusted tools (VPNs, password managers, firewalls).
- Helps users implement fixes directly from the report.
- Creates a sustainable revenue stream.

Step-by-Step: How to Build Cyber G-Tech App

1. Define Scope (MVP)

- **Core promise:** Quick cybersecurity health check for SMBs & individuals.

- **MVP features:**

- Input form (email/domain + hygiene questionnaire)
- Automated security checks (breach exposure, HTTPS, headers, SPF/DMARC)
- Score calculation (0–100, risk tier)
- PDF report with fixes, emailed to user

2. Choose Platform

- **Fast MVP (no-code):**

- Carrd/Notion/Wix → landing page
- Google Forms → data intake
- Google Sheets → backend storage + scoring logic
- Google Docs + Apps Script → report generation
- Gmail API → automated delivery

- **Scalable App (low-code/full-code):**

- **Frontend:** Flutter (cross-platform mobile) or React Native
- **Backend:** Firebase / Supabase (auth, database, hosting)
- **APIs:** Have I Been Pwned, DNS/HTTPS checks, blocklist lookups
- **Cloud:** Azure App Service or AWS Amplify for scaling

3. Build MVP in 5 Hours

- **Hour 1:** Landing page + form (Carrd + Google Form)
- **Hour 2:** Connect form → Google Sheets backend
- **Hour 3:** Add scoring logic (Sheets formulas)
- **Hour 4:** Automate report generation (Docs + Apps Script → PDF)
- **Hour 5:** Email delivery + test with 2 users

4. Execution Discipline

- **Daily sprint:** Build one feature → validate with 2–3 users → refine.
- **Weekly goal:** 10+ reports generated, 3+ testimonials, top 3 feature requests logged.
- **Month 1:** Migrate MVP into Firebase/Supabase for scalability.

5. Deployment

- **Web-first:** Host MVP on Carrd/Notion with Google backend.
- **Mobile-next:** Package into Flutter app → publish on Play Store.
- **Future:** Add dashboards, alerts, multilingual support (English + Marathi+ All Languages).

6. Validation & Growth

- **Outreach:** LinkedIn SMB groups, local business owners in MH.
- **KPIs:**
 - Lead-to-report conversion ≥ 60%
 - Avg score uplift +15 points after fixes
 - Paid upgrade rate 5–10%

Benefits of Cyber G-Tech App

For SMBs (Small & Medium Businesses)

- **Affordable Security Awareness:** Get a quick health check without hiring IT staff.
- **Compliance Support:** Helps meet basic cybersecurity requirements for audits and regulations.
- **Customer Trust:** Demonstrates proactive protection of customer data.
- **Actionable Fixes:** Simple steps (HTTPS, SPF/DMARC, 2FA) that owners can implement themselves.
- **Scalable Monitoring:** Option for monthly breach alerts and hygiene reminders.

For Individuals

- **Peace of Mind:** Know if your email or accounts are exposed in breaches.
- **Easy Fixes:** Clear guidance on enabling 2FA, using password managers, and updating devices.
- **Digital Wellness:** Encourages safe habits like backups and strong passwords.
- **No Technical Skills Needed:** Reports are written in plain language, not jargon.
- **Privacy Respect:** Minimal data collection, no storage of sensitive breach details.

For Both

- **Instant Results:** Security score and PDF report delivered within minutes.
- **Transparency:** Clear scoring rubric (0–100) with risk tiers.
- **Education:** Builds awareness of cybersecurity basics.
- **Accessibility:** Works in English + Marathi for broader reach.
- **Freemium Model:** Free scan, optional upgrades for deeper monitoring.

Value Proposition

- **SMBs:** Protect business reputation and customer data at low cost.
- **Individuals:** Gain confidence in personal digital safety.
- **Overall:** Democratizes cybersecurity by making it simple, affordable, and actionable.

☒ Conclusion

The **Cyber G-Tech App** represents a disciplined, zero-investment approach to democratizing cybersecurity for SMBs and individuals. By combining **rapid prototyping tools** (Carrd, Google Forms, Sheets, Docs, Apps Script) with a **transparent scoring system** and **plain-language fixes**, it delivers immediate value without technical barriers.

- **For SMBs:** It offers affordable compliance support, customer trust, and actionable security insights.
- **For individuals:** It provides peace of mind, breach awareness, and easy steps to strengthen digital safety.
- **For both:** It ensures accessibility, bilingual support, and a freemium model that scales into monitoring and partnerships.

Success Ratio Insights

SMB Cybersecurity Adoption (2025 Data)

- **57% of SMBs** now say cybersecurity is their **top business priority**, up from 42% in 2023.
- **58% of SMBs** spent more than planned on cybersecurity in 2024, showing rising urgency.
- **83% of SMBs** believe AI has raised the cyber threat level, but only **51% have policies in place**.
- Surveys reveal **SMBs are underprepared** but actively seeking **affordable, user-centric solutions**.
